

164 unique pdf ingested into mongoDB

The screenshot displays the MongoDB Atlas web interface for a project named "Project 0". The breadcrumb navigation shows the path: "my-first-cluster" > "rag_testcases" > "resumes". The "Documents" tab is active, showing a count of 164 documents. Below the navigation, there is a search bar with the placeholder text "Tell us what to find (e.g. movies from 2000) or paste a query in another language (SQL, Java, etc.)" and a "Generate" button. Below the search bar, there is a query input field with the text "Type a query: { field: 'value' }" and buttons for "Explain", "Reset", "Find", and "Options". Below the query input, there are buttons for "ADD DATA", "BULK", and "EXPORT CODE". Below these buttons, there is a pagination control showing "1 - 25 of 164" and navigation arrows. Below the pagination control, there is a code editor displaying a JSON document:

```
{
  "_id": ObjectId('6a9a6097b23fa0b82dfceb5d'),
  "fileName": "Abish - Marketing (1).pdf",
  "sourcePath": "Abish - Marketing (1).pdf",
  "contentHash": "ebc5c9dc44df26b21c26855db0c9b6e842acd36faec93da5184e9232e4da72e3",
  "rawText": "Phone:
